On April 16-18, 2015 COOLTECH FINLAND OY took part in the 6th biannual international conference on Ammonia and CO2 Refrigeration Technologies.

The conference is organized by International Institute of Refrigeration (IIR) and Faculty of Mechanical Engineering, University «Ss. Cyrill and Methodius», in the city of Ohrid, Macedonia since 2005 with the support of European Association for Ammonia Refrigeration (Eurammon) and International Institute of Ammonia Refrigeration (IIAR). Traditionally the conference hosted representatives from academic society, manufacturers of refrigeration equipment and potential end-users that are interested in the implementation of energy efficient refrigeration technologies in their own production.

Of all refrigerants applied today, ammonia and CO2 are the oldest that have been used since the 19th century. These refrigerants are natural and have minimum impact on the environment. COOLTECH team in its work adheres to principles of energy saving and energy efficiency, compliance with food safety when working in the food industry and the least impact on the environment. Our efforts in the field of industrial refrigeration equipment production are recognized by the international refrigeration society.

We are proud to announce that the Director of COOLTECH, Dr. Oleg Tochenyy was invited as a member of international scientific committee of the conference.

The topics of the conference this year were:
- design of modern ammonia and new CO2 systems
- technological innovations,
- improving energy efficiency,
- various applications of refrigeration technologies,
- technical guidelines for use of ammonia and CO2 and safety regulations for refrigeration equipment.

In COOLTECH company we use the latest achievements in refrigeration technologies and are doing our best to offer our customers the most efficient and environmentally friendly technology to meet international standards!
